

An invitation to shape flows

Prof. Dr. U. Stefanelli (IMATI-CNR, Pavia, Italy)

ulisse.stefanelli@imati.cnr.it

I will discuss some application of the theory of gradient flows in metric spaces to the evolution of shapes. In particular, I shall present some results regarding the evolution of capacity measures and domain driven by functionals arising in spectral optimization. This talk is based on a joint project with G. Buttazzo and D. Bucur.
