

Spatial Analysis and Modeling Tool (SAMT), a spatial modeling toolkit written in Python

Ralf Wieland

January 25, 2016

SAMT

Implementation
Graphical User
Interface
Number crunching
Open Science

Is an integrated **spatial simulation toolkit**:

- Matlab: matrix operations, powerful visualization
- GIS: points, lines, polygons, raster with geographic coordinates, database connection
- Between Matlab and a GIS to support spatial simulations

SAMT

Implementation
Graphical User
Interface
Number crunching
Open Science

Is an integrated **spatial simulation toolkit**:

- Matlab: matrix operations, powerful visualization
- GIS: points, lines, polygons, raster with geographic coordinates, database connection
- Between Matlab and a GIS to support spatial simulations
- Open Source Project: <https://github.com/Ralf3/samt2>
- Toolkit consists of: SAMT, SAMTFUZZY, SADATO

Is an integrated **spatial simulation toolkit**:

- Matlab: matrix operations, powerful visualization
- GIS: points, lines, polygons, raster with geographic coordinates, database connection
- Between Matlab and a GIS to support spatial simulations
- Open Source Project: <https://github.com/Ralf3/samt2>
- Toolkit consists of: SAMT, SAMTFUZZY, SADATO
 - ◆ Can be used with a graphical user interface,
 - ◆ as a part of a simulation on the computer cluster,
 - ◆ as a tool to build a bridge between the modeler and the stakeholder: “Open Science”

Structure of SAMT

- C/C++ is more an assembler than a high level language
- Basic libraries are changing permanently (not compatible)

- C/C++ is more an assembler than a high level language
- Basic libraries are changing permanently (not compatible)
- Python is a well structured high level language, easy to learn and use, but slow

- C/C++ is more an assembler than a high level language
- Basic libraries are changing permanently (not compatible)
- Python is a well structured high level language, easy to learn and use, but slow
- Way out: compile the “typed Python” code with **Cython** (about 30..80% of C/C++)

- C/C++ is more an assembler than a high level language
- Basic libraries are changing permanently (not compatible)
- Python is a well structured high level language, easy to learn and use, but slow
- Way out: compile the “typed Python” code with **Cython** (about 30..80% of C/C++)
- Python comes with a set of **scientific modules**
- NumPy can be used to vectorization of programs, (Matlab)
$$x[x>6.35] = x[x>6.35]*28.33E-03$$

- C/C++ is more an assembler than a high level language
- Basic libraries are changing permanently (not compatible)
- Python is a well structured high level language, easy to learn and use, but slow
- Way out: compile the “typed Python” code with **Cython** (about 30..80% of C/C++)
- Python comes with a set of **scientific modules**
- NumPy can be used to vectorization of programs, (Matlab)

$$x[x>6.35] = x[x>6.35]*28.33E-03$$
- Matplotlib produces high quality scientific plots
- SciPy provides common scientific methods (solve differential eqns)
- **SciKit** includes nearly all methods of soft computing

- C/C++ is more an assembler than a high level language
- Basic libraries are changing permanently (not compatible)
- Python is a well structured high level language, easy to learn and use, but slow
- Way out: compile the “typed Python” code with **Cython** (about 30..80% of C/C++)
- Python comes with a set of **scientific modules**

$$x[x>6.35] = x[x>6.35]*28.33E-03$$
- Matplotlib produces high quality scientific plots
- SciPy provides common scientific methods (solve differential eqns)
- **SciKit** includes nearly all methods of soft computing
- Other modules helps for daily work: datetime, **hdf5**, pandas,...

Parts of SAMT2

SAMT

Implementation

Graphical User
Interface

Number crunching

Open Science

- IO: ASCII, HDF, random
- Access: header, value, matc, matp

Parts of SAMT2

SAMT

Implementation

Graphical User
Interface

Number crunching

Open Science

- IO: ASCII, HDF, random
- Access: header, value, matc, matp
- Visualization: show, showi, show3d, showbw, show_hist
- Statistics: hist, mean_std, min, max, unique, corr, sample
- Simple: norm, classify, replace, add, mul
- Complex: invert, lut, border, cut, varpart

- Application:
 - ◆ Yield estimation under climate change large regions in Germany (Brandenburg, Thuringia and Saxony with an grid size of 1ha)

- Application:
 - ◆ Yield estimation under climate change large regions in Germany (Brandenburg, Thuringia and Saxony with an grid size of 1ha)
 - ◆ Analysis of soil slices from X-Ray CT image stack

- Application:
 - ◆ Yield estimation under climate change large regions in Germany (Brandenburg, Thuringia and Saxony with an grid size of 1ha)
 - ◆ Analysis of soil slices from X-Ray CT image stack
 - ◆ Modeling of Mosquitoes movement and habitat quality for Mosquitoes of Germany

■ Application:

- ◆ Yield estimation under climate change large regions in Germany (Brandenburg, Thuringia and Saxony with an grid size of 1ha)
- ◆ Analysis of soil slices from X-Ray CT image stack
- ◆ Modeling of Mosquitoes movement and habitat quality for Mosquitoes of Germany
- ◆ using a SVM to generate maps for controlling the fertilizer broadcaster

- Application:
 - ◆ Yield estimation under climate change large regions in Germany (Brandenburg, Thuringia and Saxony with an grid size of 1ha)
 - ◆ Analysis of soil slices from X-Ray CT image stack
 - ◆ Modeling of Mosquitoes movement and habitat quality for Mosquitoes of Germany
 - ◆ using a SVM to generate maps for controlling the fertilizer broadcaster
- Python controls the cluster using MPI
load data, calc, collect data

relyield from equipment

measured yield

SVM

ground water distance,
capillary rise,
usable field capacity

Application: Can the user be included in modeling?

- Science is data collection plus modeling
- Applied science is an application of science to problems

Application: Can the user be included in modeling?

- Science is data collection plus modeling
- Applied science is an application of science to problems
- We have the software and the interactive environment:
“ipython notebook”,
 - ◆ open source software,
 - ◆ documentation,
 - ◆ interactivity

Application: Can the user be included in modeling?

- Science is data collection plus modeling
- Applied science is an application of science to problems
- We have the software and the interactive environment: “ipython notebook”,
 - ◆ open source software,
 - ◆ documentation,
 - ◆ interactivity
- the stakeholders have knowledge (models) and knows the problems, why do we not include them in science?
