Spectral shift functions for pairs of non-selfadjointness operators

Prof. M. M. Malamud

(Donetsk National University, Ukraine)

The existence and properties of spectral shift functions for pairs of maximal dissipative, accumulative operators will be discussed. We will also discuss SSF for pairs $\{A, A^*\}$ consisting from an operator A with non-empty resolvent set and its adjoint A^*. The talk is based on a joint work with H. Neidhardt.
